

Abstract of the Disclosure

A trailer hitch having a tubular column between a hitch ball and a towing vehicle.

A mating shaft with a horizontal retaining plate has a mating shaft fitting removably within the tubular column. A pin through mating openings in the shaft and tubular

5 column maintain the retaining plate above a trailer arm socket mounted on the hitch ball.

A guide with a pair of tapered vertical walls forming a horizontal V-shape has a mating shaft which fits alternately in the tubular column to guide a trailer arm into engagement with the hitch ball.
